

### David Churcher Sustainable Construction Group BSRIA

## Nanopigmy

• The project

- Objectives, who is involved, progress so far

- BSRIA's role
  - Validating the business benefit of the innovations being developed
- Applying the validation principles to business practice

# The Nanopigmy project

- EU Framework 7 project
- Running from 1 March 2012 to 28 Feb 2015
- 8 partners (3 Spain, 2 UK, 1 Italy, 1 Poland, 1 Netherlands)
- Budget of €4.6million

## Nanopigmy objectives

- Produce multi-functional pigments ...
- ... for construction and automotive applications ...
- ... that deliver economic and environmental benefit ...
- ... by simplifying component manufacture and ...
- ... improving operational performance.

### **Nanopigmy partners**

### Progress so far

- Pigment functionalities specified
  - Thermal storage, infra-red reflectance, antibacterial, self cleaning, self healing
- Laboratory formulations of 6 pigments with selected pairs of functionalities
- Pilot plant manufacture of some pigments
- Definition of construction demonstrators

### **BSRIA's role**

- Validate the economic and environmental costs and benefits of each pigment in relation to traditional solutions
- Life cycle costing to assess economic impacts
- Life cycle assessment to identify environmental impacts

### **Pigments we are validating**

- A Thermal storage + antibacterial in paint and polymer board
- B Thermal storage + self-cleaning in concrete render
- C Infra red reflectance + self cleaning in concrete render

### **Base Case vs Nanopigmy**

### Life cycle costing

### LCC results so far

 Life cycle costs analysed using BSRIA's LCC Calculator (100 years, 6% discount rate)

| Data category              | Original paint<br>/walls cleaned<br>daily | Modified paint<br>/walls cleaned<br>weekly | Original polymer<br>board | Modified polymer board |  |
|----------------------------|---|--|---------------------------|------------------------|--|
| Cooling load               | 10,770 kWh/y                              | 10,713 kWh/y                               | 10,920 kWh/y              | 10,346 kWh/y           |  |
| Heating load               | 16,348 kWh/y                              | Same                                       | 16,471 kWh/y              | Same                   |  |
| Construction<br>cost (NPV) | £173,881                                  | Same                                       | £170,792                  | Same                   |  |
| Maintenance<br>cost (NPV)  | £52,250                                   | £37,042                                    | £50,269                   | £35,060                |  |
| Operating cost<br>(NPV)    | C £19,507<br>H £7,578                     | C £19,404<br>H £7,578                      | C £19,779<br>H £7,636     | C £18,740<br>H £7,636  |  |
| TOTAL (NPV)                | £253,216                                  | £237,906<br>(-6.0%)                        | £248,476                  | £232,228<br>(-6.5%)    |  |

### Life cycle assessment

### LCA results so far

• Environmental impacts analysed using Sima Pro

| Data<br>category                 | Original<br>paint<br>/render<br>IR=0.3 | Modified<br>paint<br>(thermal<br>store only)  | Double<br>quantity of<br>modified<br>paint    | Modified<br>render<br>IR=0.5                    | Modified<br>render<br>IR=0.7                   |
|----------------------------------|--|---|---|---|--|
| Cooling<br>load                  | 10,770<br>kWh/y                        | 10,713<br>kWh/y                               | 10,656<br>kWh/y                               | 8,078 kWh/y                                     | 5,924 kWh/y                                    |

## Applying the principles to business

- Life cycle costing and life cycle assessment allow the effects of a material or product innovation to be considered in advance
- Can indicate where innovations have most impact
- Can help avoid costly mistakes
- Close liaison with supplier/manufacturer is needed to obtain robust data

# Thank you
